

AiR: FLOW WITH AI

ONE-HOUR HIGH SCHOOL EXPERIENCE

Participants 20 students	Teams 4 teams of 5 students
Core lesson 45 minutes	Opening and team setup 15 minutes

Theme: Clear the AiR. Then Make Something.

SIMPLE PURPOSE

AiR teaches students how to communicate with artificial intelligence—not simply how to use it.

Students will learn four easy moves:

1. CLEAR — Decide exactly what you want.
2. DIRECT — Give AI clear instructions.
3. JUDGE — Check what AI created.
4. MAKE — Improve it until it is useful.

AI creates the draft. You provide the direction, judgment, and final decision.

ONE-HOUR CLASS PLAN

0-5 MINUTES: WELCOME AND TEAM FORMATION

As students enter, display two images on the board:

- One distinctive car
- One distinctive house

Tell the students:

“Today, you are not just learning about AI—you are competing to see which team can communicate with it most effectively.”

Ask the 20 students to divide into four teams of five. Each team should:

- Choose a team name.
- Select a captain.
- Sit or stand together.
- Choose either the car or house challenge.

The captain keeps the team organized, but every student must participate.

5-15 MINUTES: EXPLAIN THE AiR MISSION

Ask the class:

“If AI is so smart, why doesn’t it always give us exactly what we want?”

Allow two or three students to answer.

EXPLAIN THE AiR MISSION

Explain:

“AI cannot read your mind. The result is only as clear as the direction you give it. Learning to flow with AI means knowing what you want, communicating it clearly, checking the result, and improving it.”

Introduce the four AiR moves:

CLEAR	Know what you want.
DIRECT	Explain it clearly to AI.
JUDGE	Check what AI got right or wrong.
MAKE	Improve and complete the result.

Give a quick example:

Weak prompt: “Create a cool car.”

Clearer prompt: “Create a red two-door sports car with black wheels, a low roof, narrow headlights, tinted windows, and a large rear spoiler.”

Ask:

“Which prompt gives AI a better chance of creating the right car—and why?”

THE MAIN ACTIVITY

15-20 MINUTES: EXPLAIN THE AiR PROMPT RELAY

Each team must use AI to recreate the car or house displayed on the board.

The goal is not simply to make something attractive. The goal is to create something that most closely matches the reference image.

THE CHALLENGE

- Teams may study the reference image.
- They cannot upload or photograph the image for AI.
- They must recreate it using written prompts only.
- Every student must contribute.
- Teams receive a limited number of AI generations.
- The closest final result wins.

This demonstrates a powerful lesson:

Seeing something is easy. Clearly communicating what you see takes observation, teamwork, and judgment.

20-35 MINUTES: THE PROMPT RELAY

Each student takes one role in the relay.

THE PROMPT RELAY: TEAM ROLES

STUDENT 1: THE OBSERVER — CLEAR

The Observer studies the image and identifies the most important details:

- What is it?
- What is its main shape?
- What colors are present?
- What makes it distinctive?
- What is in the background?

The Observer cannot write the entire prompt alone. Their job is to help the team decide what matters most.

STUDENT 2: THE DESIGNER — DIRECT

The Designer turns the team's observations into the first prompt.

A simple structure should be used:

“Create a [subject] that is [color and shape]. It has [important features]. Show it from [view or angle]. Place it against [background]. Use a [realistic, illustrated, futuristic, or other] style.”

STUDENT 3: THE AI OPERATOR — MAKE

The Operator enters the prompt into the AI image generator and displays the first result.

The team then compares the AI image with the reference.

THE PROMPT RELAY: TEAM ROLES

STUDENT 4: THE QUALITY CHECKER — JUDGE

The Quality Checker asks:

- What did AI get right?
- What did AI miss?
- What is the biggest difference?
- What should be added, removed, or changed?

The student must provide specific corrections—not simply say that the image “doesn’t look right.”

STUDENT 5: THE FINISHER — IMPROVE

The Finisher works with the team to write the revision prompt.

“Keep the same car, but make the roof lower, change the wheels to black, make the headlights narrower, remove the background buildings, and show the car from the front-left angle.”

The team generates its revised image.

CAPTAIN’S RESPONSIBILITY

The captain:

- Keeps everyone involved.
- Watches the time.
- Makes sure instructions are specific.
- Selects the team’s final image.
- Gives the team’s short presentation.

If time permits, teams can rotate roles for one final revision.

35-45 MINUTES: FINAL REVISION

Give every team one last opportunity to improve its image.

Before generating, the team must answer:

1. What is the largest difference between our image and the reference?
2. What exact words could correct it?
3. What should remain unchanged?
4. Are we improving the image—or accidentally making it worse?

Encourage prompts such as:

“Keep everything else the same, but...”

This teaches students that controlling AI often requires making focused changes instead of starting over.

45-52 MINUTES: TEAM PRESENTATIONS

Each captain gets approximately one minute to present.

They should answer:

- What did your team try to create?
- What was your first prompt?
- What did AI misunderstand?
- How did your team improve the prompt?
- What did you learn about communicating with AI?

Display the reference and each team’s final image side by side.

52-56 MINUTES: SELECT THE WINNING TEAM

Score each team using five simple categories:

Similarity to the reference image	10
Clear and detailed prompting	5
Improvement between attempts	5
Teamwork and participation	5
Explanation of their process	5
Total	30

To make the ending more exciting, give three recognitions:

- AiR Challenge Champion — Closest overall match
- Best Prompt Engineers — Clearest instructions
- Best AI Comeback — Greatest improvement from first to final image

Small prizes could include certificates, snacks, AiR wristbands, or the opportunity to have the winning image featured on the AiR website or social media—with school and parent approval.

56-60 MINUTES: CONNECT AiR TO REAL LIFE

Explain that the same four moves work beyond image generation.

PERSONAL LIFE

Students can use AI to:

- Plan a personal goal.
- Create a workout or meal plan.
- Organize a schedule.
- Develop a creative hobby.
- Compare choices before making a decision.

SCHOOL

Students can use AI to:

- Understand difficult subjects.
- Create study guides.
- Practice for tests.
- Brainstorm project ideas.
- Improve their writing without having AI do all the thinking.

FUTURE CAREERS

Students can use AI to:

- Explore careers.
- Practice interviews.
- Build résumés.
- Design products.
- Develop business ideas.
- Create marketing campaigns.
- Solve workplace problems.

CLOSING ACTIVITY: THE ONE-MOVE CHALLENGE

Remind them:

Never automatically trust an AI answer. Check important information, protect personal information, follow school rules, and use your own judgment.

Ask each student to complete this sentence:

“This week, I can use AI to help me _____.”

Invite four or five students to share their answers.

Close with:

“You do not need to become an AI expert today. You need to know your purpose, give clear direction, challenge the result, and make something useful. That is how you flow with AI.”

FINAL AiR CALL-AND-RESPONSE

Instructor: “What comes before the tool?”

Students: “Purpose!”

Instructor: “Who makes the final decision?”

Students: “We do!”

Instructor: “Clear the AiR...”

Students: “...then make something!”

CLEAR THE AiR. THEN MAKE SOMETHING.
